

AHMED DAHDOUH

Software Engineering Student • Detection & Response

Zhengzhou, China • adahdouh123@gmail.com • ahmeddah1.github.io • github.com/AhmedDAH1 • linkedin.com/in/ahmed-dahdouh

SUMMARY

Software Engineering student (graduating 2027) focused on detection engineering. Built five security tools covering SOAR automation, phishing detection, log correlation, network reconnaissance, and attack surface mapping, each with automated tests, CI/CD, and Docker. Seeking graduate study in IT security, research roles, and internships.

TECHNICAL SKILLS

Security & Blue Team: Threat Detection • Incident Response • SIEM Concepts • Log Analysis • IOC Extraction • MITRE ATT&CK • Phishing Analysis • Threat Intelligence (VirusTotal, AbuseIPDB, Shodan) • Packet Analysis (Wireshark) • Vulnerability Assessment

Programming & Tools: Python (FastAPI, Flask, asyncio, Scapy) • REST APIs • PostgreSQL • SQLite • Docker • GitHub Actions CI/CD • Linux / Bash • pytest • Git

Learning: Sigma detection rules • Penetration Testing (Metasploit, Burp Suite, Nmap) • MISP/OpenCTI • STIX/TAXII

SECURITY PROJECTS

SOAR-Lite — Security Orchestration, Automation & Response Platform

Python • FastAPI • PostgreSQL • Docker

github.com/AhmedDAH1/soar-lite • [6-min demo video](#)

- ▶ Automated full SOC triage workflow: alert ingestion via webhooks, IOC extraction, async threat-intel enrichment, YAML-based playbook engine, and one-click PDF/DOCX report generation.
- ▶ Reduced incident response time from 30+ minutes to under 2 minutes on simulated SIEM/EDR alerts.
- ▶ 53 tests • 84% coverage • GitHub Actions CI/CD • Docker Compose deployment.

Email Threat Analyzer — Phishing Detection Engine

Python • Flask • VirusTotal API • pytest

github.com/AhmedDAH1/email-threat-analyzer

- ▶ Parses .eml files, analyzes headers, URLs, attachments, and body, and outputs a weighted 0–100 threat score with VirusTotal enrichment.
- ▶ 73% detection on the Nazario phishing corpus (414 real-world emails), with a labeled benign control set • 34 tests • CI.

Log Threat Detector — SIEM-Style Log Analysis & Correlation

Python • Flask • SQLite • AbuseIPDB

github.com/AhmedDAH1/log_threat_detector

- ▶ Ingests SSH, Apache, and syslog files to detect brute-force attempts, port scans, and anomalies; correlation engine identifies cross-source attack patterns.
- ▶ Real-time Flask + WebSocket dashboard with AbuseIPDB enrichment, email alerting, and SQLite persistence.

Attack Surface Mapper — Security Assessment Platform

Python • Flask-SocketIO • MITRE ATT&CK

github.com/AhmedDAH1/attack-surface-mapper

- ▶ Automated vulnerability scanning with MITRE ATT&CK mapping and compliance checks against PCI-DSS v4.0, NIST CSF, and CIS Controls v8.
- ▶ CLI, terminal dashboard, and web UI, with Shodan exposure checks and PDF/HTML/CSV/JSON reports • 23 tests.

Network Scanner — Network Reconnaissance

Python • Scapy • Flask • Docker

github.com/AhmedDAH1/network-scanner

- ▶ ARP/ICMP host discovery, multi-threaded SYN/UDP port scanning, TTL-based OS fingerprinting, and CVE lookup; runs with least-privilege NET_RAW capability.

EDUCATION

B.Sc. Software Engineering — Zhengzhou University, China

2021 – 2027

CERTIFICATIONS

- ▶ **Google Cybersecurity Professional Certificate** — Google / Coursera, completed Oct 2026 • [verify](#)
- ▶ **Cisco Endpoint Security** — completed
- ▶ **Cisco Introduction to Cybersecurity** — completed
- ▶ **Python Security Fundamentals** — completed
- ▶ **CompTIA Security+ (SY0-701)** — in progress

ADDITIONAL

- ▶ **English Teacher** — Primary school (Grades 3 and 6), 2024 – present. Develop weekly lesson materials for ~60 students; strengthens written and verbal communication for incident documentation and stakeholder briefings.
- ▶ **Languages:** Arabic (native) • English (fluent) • French (intermediate) • Mandarin (conversational) • German (learning)
- ▶ **Practice:** TryHackMe (SOC L1 path) • PicoCTF (Web Exploitation, Forensics)
